Call for Workshop Proposals

The Israel Association for Automatic Control (IAAC) is opening a call for workshop proposals. We invite proposals on new and emerging topics within the scope of control engineering at large. Proposals should aim for interactive formats that foster discussion and knowledge exchange in cutting-edge areas of automatic control. Tutorial talks are encouraged as part of the program.

Proposals should include:

1. Workshop title
2. Organizers:
   - name, affiliation, address, and email for each organizer
   - main contact person
3. Workshop description:
   - one paragraph (up to 300 words) outlining focus and objectives
4. Tentative program
5. List of confirmed speakers

IAAC will manage venue, registration, and general administration of the workshop. Organizers should focus on workshop content and structure.

Proposals should be sent in PDF format to Daniel Zelazo by dzelazo@technion.ac.il.
